

Sphere Medical Holding PLC

Sphere Medical exhibiting at ISICEM 2012

Sphere Medical will be exhibiting its Proxima and Pelorus 1000 products at the 32nd International Society for Intensive Care and Emergency Medicine meeting. The conference will take place on 20 – 23 March 2012 at the Square conference centre in Brussels, Belgium.

The International Symposium on Intensive Care and Emergency Medicine is organised by the department of Intensive Care Emergency Medicine of Erasme University Hospital, Université Libre de Bruxelles, in association with the Belgian Society of Intensive Care and Emergency Medicine (SIZ). Started in 1980, this meeting has become established as one of the largest in its field, now attracting more than 5630 participants from countries world-wide.

The objectives of this four day symposium are to provide participants with an up to date review of the most recent, clinically relevant, developments in research, therapy, and management of the critically ill. The meeting is open to all physicians, nurses and other health professionals with an interest in critical care or emergency medicine.

About Sphere Medical

Sphere Medical commenced trading on the AIM, a market operated by the London Stock Exchange (LSE) on 17 November 2011 having raised £14m (£12.8m net of expenses) in a placing of ordinary shares.

Sphere Medical is a UK based medical device company completing the development of a range of monitoring and diagnostic products designed to provide significant improvements in patient management in a number of hospital specialities. Sphere Medical's products are expected to allow near real time measurement of blood gases, various electrolytes and drug levels with laboratory accuracy, at the patient's bedside. This information can be used in a wide range of medical applications and is intended to enable faster clinical decision making and consequently to improve the management of patients.

Sphere Medical's two most advanced products, based on its proprietary microanalyser platform technology, are a disposable patient-attached arterial blood analyser for use in the Intensive Care Unit and Operating Room ('Proxima') and a device for continuous blood monitoring in the bypass circuit in patients undergoing cardiopulmonary bypass surgery ("CPB device"). Sphere Medical has also developed and is selling a device ('Pelorus 1000') that can measure blood levels of the intravenously administered anaesthetic drug, propofol. In each case, these products will ultimately target patients requiring close monitoring and frequent levels of blood testing.

Sphere Medical employs approximately 45 staff in the areas of research and development, product development, sales and marketing and management and operations at its premises at Harston, Cambridge, UK.
